

Get more out of your keyboard!

Get more out of your keyboard!

Our ready-for-use standard keyboards offer a wide range of personalized options. Would you like to put your logo on the user interface? Do you need special key functions or additional control elements such as emergency stop buttons? Or do you need a specific interface?

In contrast to pure customized projects that initiate with the new development of a device, our adjustments are based on existing standard products. This has both positive effects on the costs and implementation time.

Our sales team will discuss with you without any obligation all possibilities for personalized adjustments and create appropriate concepts for you. Many of our customers take up the possibility of a product variation of their own.

Examples of personalized adjustments

1. Integrated trackball in different versions
2. Integrated touchpad
3. Integrated joystick
4. Antimicrobial surface
5. Personalized printing of membranes, silicone and glass
6. Optional USB-ports
7. Relief printing on user interfaces
8. Additional buttons
9. Nano paint coating
